a Type 3: Repeated Obs in both

- Variation in predictors (BC) and responses (BU)

- Stat. Analysis : ML - Approaches

- Approx : · Replace repeated obs in predictors
  by mean / median

  · Use type 2 analysis

Type2 Repeated Observations

☐ Appearance of Linear mixed effects model (LME)

☐ LME are used, if data has spesific
  structure (hierarchical) in variation of
  Observations ⟹ Model

☐ Model : $var(e) = I b_e^2$ in ordinary
  regression is replaced by a more
  general matrix V
